Full House in Ho Chi Minh, Vietnam

With a full house in Vietnam, Ho Chi Minh, PI-Southeast Asia finished this years Seminar Series.

The Seminar was supported by Siemens, Phoenix Contact, Pepperl + Fuchs, ABB, Leoni Cable and Link Vue. These companies provided live demonstrations of their products and solutions at a Microfair, giving Seminar participants the chance to discuss these face to face with experts.

Again the brand new PROFINET multivendor demo was introduced. This showed the wireless integration of PROFIBUS-DP/PA into PROFINET, also the integration of different products and protocols. The live engineering of an IO-System was demonstrated along with PROFINET's web diagnostic functions.

PROFenergy Video now available

PI has been the first organization to create a profile based on PROFINET for energy management: **PROFenergy**. Along with energy data acquisition, PROFenergy stands out by the possibility to easily shut down machinery and system parts during pauses in a controlled way. The network itself remains available at any time and the devices can be accessed. PROFenergy always ensures that the whole system is available again in time.

Many production units are not running 24h per day and 7 days a week. Those machines have an enormous potential to reduce the energy consumption in pauses. With PROFenergy, unneeded devices can be switched to an energy saving mode – manufacturer independent and reliable. Thus, energy savings during pauses of up to 80% can be achieved!
